INSTALLATION GUIDE
AIR BAG & RIGID
FILLER WINGS
THESE COMPONENTS ARE REQUIRED TO INSTALL THE PRO-GARD FILLER WINGS

WING KIT

I. The following tools will be required to complete the installation.

A. 1/4” or 3/8” drive ratchet with 7/16” socket
B. 7/16” combination or box end wrench

II. Read all instructions carefully before starting the assembly process.

III. Filler Wing Identification

NOTE: There are two wing for the Pro-gard Partition System. Option 1 is the standard “Rigid” Filler Wings (Fig. 1). Option 2 is the “Air Bag” compliant Filler Wings (Fig. 2).

IV. Rigid Filler Wing Installation

A. Place the Passenger’s Side Filler Wing against the rear of the Partition, aligning it with the mounting holes in the partition. Using the supplied 1/4-20 x 5/8” Carriage Bolts (3X36) and 1/4-20 Whiz nuts (3X16Z) secure the wing to the partition (See Fig. 1)

B. Repeat process for the Driver’s side.

V. Air Bag wing Installation

A. Attach three Wing Mounting Brackets (3P928) to the Driver’s Side Air Bag Wing by placing the long leg of the bracket against the inside surface of the wing so the bracket wraps around the edge of the wing (Fig. 2). Start the 1/4-20 x 1/2” (3X92) bolts from the opposite side of the wing and out through the bracket so the Whiz nut (3X16Z) will tighten against the bracket. (Fig. 3).

B. When complete, mount the assembly to the front side of the partition with the remaining 3X92 bolts and 3X16Z nuts. Be sure the wing is free to flex inward toward the center of the vehicle (See Fig. 3).

C. Repeat Process for the Passenger’s Side

VI. Filler Wing Installation is now complete.
