

# AIR BAG COMPATIBLE PARTITION FILLER WINGS

FILLER WING PRIOR TO AIR BAG DEPLOYMENT

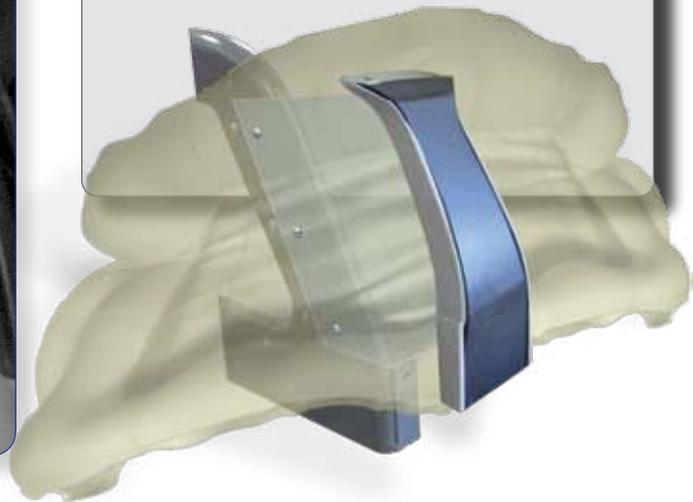

FILLER WING AFTER AIR BAG DEPLOYMENT

## PRODUCT FUNCTION

- Encloses spaces between partition edges and the b-pillar/headliner of the vehicle
- Designed to give-way during a side-curtain airbag deployment; allowing for successful air bag deployment

## PRODUCT DESIGN

- Laboratory tested
- 1/8" molded, clear, polycarbonate panel designed to fit the contours of the vehicle make/model, provides ample resistance against access to the front cabin
- Deflector wing design extends into the headliner area, providing the initial point of contact with headliner during deployment, this repositions the wing for uninterrupted air bag deployment
- After initial contact with headliner, flexing "Z Brackets" allow smooth movement of filler wing away from window/air bag during the air bag deployment thus allowing the air bag to drop successfully
