TRANSMISSION SKID PLATES

Our Transmission Skid Plate works with or without our (front) skid plate on the 2020 Ford Interceptor Utility. There are two variants of the rear bracket, gas and hybrid, that achieves perfect fit with either power-train. The 11 gauge powder-coated steel skid plate protects the plastic transmission sump as well as the transmission heat exchanger mounted underneath the vehicle. It is easy to install and can be easily removed with a single tool to gain access for servicing.

TRANSMISSION SKID PLATE FEATURES

- » Provides an added layer of protection to the vehicle's transmission that is otherwise exposed
- » Easily removable for routine maintenance
- » No Holes Drilled utilizes existing OEM mounting points for an easy install
- » Works with or without our skid plate
- » Made of 11 gauge powder-coated steel
- » Available for both the standard and hybrid models
