## **INSTALLATION GUIDE**

WBP57T15
POLY WINDOW ARMOR AND
ABS DOOR PANEL
2015 - CURRENT TAHOE

STRONG | RELIABLE | SECURE

## THESE COMPONENTS ARE REQUIRED TO INSTALL THE PRO-GARD STEEL WINDOW ARMOR

- I. Refer to the diagram on the last page to verify all parts were received.
- II. The following tools will be required to complete the installation.
  - 1. Drill with standard #2 Philips driver
  - 2. Drill bit 3/32" diameter
- III. Read all instructions carefully before starting the assembly process.

**NOTE:** *Locate all wiring before drilling holes or installing any fasteners.* 

## IV. OEM Door Panel Removal

A. Remove the OEM door panel from the door frame. (See Fig. 1)

Note: Remove the window seal from door panel, this will be used before the window armor is installed.

- B. Now remove the door speaker from the vehicle.
- C. Next Push the large rubber grommet into the door shell, along with the wires. Also push in the door latch cable and lower the door lock rod out of the way.

- E. Secure the door latch cable to the door frame so it will not rattle.
- F. Make sure the power window switch is connected to the harness, protect it from moisture and secure the harness inside the door frame away from the window travel.

Note: The window switch must be reinstalled. If window switch is not reinstalled the vehicle will register that the door is ajar. Furthermore. the driver will not have the ability to roll the window up or down.

## V. **ABS Door Panel Installation**

- A. Place the window seal back onto the door frame as though the door panel was there.
- B. Next, place the ABS Door Panel against the door and align. Once the panel fits flush around the door latch (see Fig. 2), install one #8 x 5/8 to both sides of the door. Ensure that the side of the ABS Door panel closest to the door hinges is flush with the door.
- C. Attach the remainder of the door panel, from top to bottom with the supplied screws, Type A-self tapping, sometimes it is necessary to drill a 3/32" pilot. (See Fig. 3)

- A. Raise the Window Armor above the ABS door panel. Then lower the Window Armor so that the ABS door panel slides into the Window Armor's lower bracket. Ensure that the retaining flanges on lower bracket fit onto the window seal correctly.
- B. Center the outside of the metal mounting frame on the door from side to side. While appling pressure down on the Window Armor, ensure that the outer side brackets bottom out onto the ABS door panel.
- C. If the side brackets do not touch the abs panel then it is necessary to mark the rubber window seal where the flanges hit. Remove the Window Armor. Using a razor knife, cut slits through only the first layer of the window seal. Now reinstall the Window Armor.
- D. Align the upper bracket of the Window Armor to the upper door frame, before securing.
- E. Install all screws from the bottom to the top of the Window Armor. Using the #8 x 5/8 self tapping screws. Followed by the remaining two lower screw locations in the lower bracket of the Window Armor. (See Fig. 4)
